# **Access Reader**

# **User's Manual**

### **Foreword**

### General

This manual introduces the functions and operations of the Access Reader. Read carefully before using the device, and keep the manual safe for future reference.

### **Safety Instructions**

The following signal words might appear in the manual.

Signal Words	Meaning
<b>A</b> DANGER	Indicates a high potential hazard which, if not avoided, will result in death or serious injury.
<b>WARNING</b>	Indicates a medium or low potential hazard which, if not avoided, could result in slight or moderate injury.
<b>A</b> CAUTION	Indicates a potential risk which, if not avoided, could result in property damage, data loss, reductions in performance, or unpredictable results.
NOTE	Provides additional information as a supplement to the text.

### **Privacy Protection Notice**

As the device user or data controller, you might collect the personal data of others such as their face, audio, fingerprints, and license plate number. You need to be in compliance with your local privacy protection laws and regulations to protect the legitimate rights and interests of other people by implementing measures which include but are not limited: Providing clear and visible identification to inform people of the existence of the surveillance area and provide required contact information.

### About the Manual

- The manual is for reference only. Slight differences might be found between the manual and the product.
- We are not liable for losses incurred due to operating the product in ways that are not in compliance with the manual.
- The manual will be updated according to the latest laws and regulations of related jurisdictions.

# **Important Safeguards and Warnings**

This section introduces content covering the proper handling of the Card Reader, hazard prevention, and prevention of property damage. Read carefully before using the Card Reader, and comply with the guidelines when using it.

### **Transportation Requirement**

Transport, use and store the Card Reader under allowed humidity and temperature conditions.

### Storage Requirement

Store the Card Reader under allowed humidity and temperature conditions.

### **Installation Requirements**

#### WARNING

- Do not connect the power adapter to the Card Reader while the adapter is powered on.
- Strictly comply with the local electric safety code and standards. Make sure the ambient voltage is stable and meets the power supply requirements of the Access Controller.
- Do not connect the Card Reader to two or more kinds of power supplies, to avoid damage to the Card Reader.
- Improper use of the battery might result in a fire or explosion.

- Personnel working at heights must take all necessary measures to ensure personal safety including wearing a helmet and safety belts.
- Do not place the Card Reader in a place exposed to sunlight or near heat sources.
- Keep the Card Reader away from dampness, dust, and soot.
- Install the Card Reader on a stable surface to prevent it from falling.
- Install the Card Reader in a well-ventilated place, and do not block its ventilation.
- Use an adapter or cabinet power supply provided by the manufacturer.
- Use the power cords that are recommended for the region and conform to the rated power specifications.
- The power supply must conform to the requirements of ES1 in IEC 62368-1 standard and be no higher than PS2. Please note that the power supply requirements are subject to the Card Reader label.
- The Card Reader is a class I electrical appliance. Make sure that the power supply of the Card Reader is connected to a power socket with protective earthing.

### **Operation Requirements**

- Check whether the power supply is correct before use.
- Do not unplug the power cord on the side of the Card Reader while the adapter is powered on.
- Operate the Card Reader within the rated range of power input and output.
- Use the Card Reader under allowed humidity and temperature conditions.
- Do not drop or splash liquid onto the Card Reader, and make sure that there is no object filled with liquid on the Card Reader to prevent liquid from flowing into it.
- Do not disassemble the Card Reader without professional instruction.

## 1 Product Overview

### 1.1 Introduction

In most access control systems, an access control card reader is a security system that requires a swipe of a credential card to verify the person entering the room/space is cleared. It is suitable for a wide variety of scenes such as office buildings, schools, compounds, communities, factories, public venues, business centers and government buildings.

### Model A

Model A has 2 types, which is the card reader with keypad and the card reader without keypad. This section uses the one with keypad as an example.

# 2 Ports and Installation

# 2.1 Wiring Requirements

- Connect the card reader to the Wiegand ports or the RS-485 ports according to the type of the card reader.
- Select proper wires according to the requirements on wires.

Table 2-1 Ports overview

Color	Port	Description
Red	12 V	Power supply
Black	GND	
Blue	CASE	Anti-tampering alarm signals(for Wiegand card reader)
White	D1	Wiegands transmission signals (for Wiegand card reader)
Green	D0	
Brown	LED	Wiegand responsive signals (for Wiegand card reader)
Yellow	RS-485_B	- RS-485 card reader
Purple	RS-485_A	

Table 2-2 Wiring requirements of card reader

Туре	Impedance Requirements	Length Requirements
RS485 card reader	Connects RS-485 wires, and the impedance of a single wire must $\leq$ 10 $\Omega$ .	≤ 100 m.  Above UL1061 24AWG shielded wires are recommended.
Wiegand card reader	Connects Wiegand wires, and the impedance of a single wire must $\leq 2 \Omega$ .	≤ 80 m.  Above UL1061 18AWG shielded wires are recommended.

### 2.2 Installation Procedure

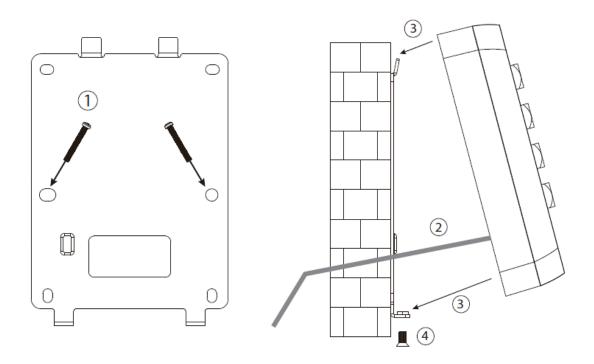

The installation procedure of model M and model A is same. This section uses the installation of model M as an example.

### Procedure

- Step 1 Mount the bracket to the wall or a mounting surface
- <u>Step 2</u> Wire the card reader. For details, see "2.1 Wiring Requirements".

- Step 3 Attach the Card reader to the bracket.
- <u>Step 4</u> Screw in a screw on the bottom of the card reader.

# 3 Unlocking the Door

Swipe card on the card reader to open the door. For card reader with keypad, you can also unlock the door by entering the user ID and password.

- Unlock the door through public password: Enter the public password, and then tap #.
- Unlock the door through user password: Enter the user ID and tap #, and then enter the user password and tap #.
- Unlock the door through card + password: Swipe card, enter the password, and then tap #.

If the password is correct, the indicator is green and the buzzer sound once. If the password is incorrect, the indicator is red, and the buzzer sounds 4 times (RS-485 communication) or sounds 3 times (Wiegand communication or no signal line is connected).

# 4 Updating the System

### 4.1 Updating through SmartPSS Lite

### **Prerequisites**

- The Card Reader was added to the access controller through RS-485 wires.
- The access controller and Card Reader are powered on.

### **Procedure**

<u>Step 1</u> Install and log in to SmartPSS Lite, and then select **Device Manager**.

Step 2 Click .

Figure 4-1 Select the access controller

The indicator of the Card Reader flashes blue until the update is completed, and then the Card Reader automatically restarts.

### 4.2 Updating through Config Tool

### **Prerequisites**

- The Card Reader was added to the access controller through RS-485 wires.
- The access controller and Card Reader are powered on.

### Procedure

- <u>Step 1</u> Install and open the Configtool, and then select **Device upgrade**.
- Step 2 Click of an access controller, and then click .
- Step 3 Click **Upgrade**.

The indicator of the Card Reader flashes blue until update is completed, and then the Card Reader automatically restarts.

# **Appendix 1 Security Recommendation**

### **Account Management**

### 1. Use complex passwords

Please refer to the following suggestions to set passwords:

- The length should not be less than 8 characters;
- Include at least two types of characters: upper and lower case letters, numbers and symbols;
- Do not contain the account name or the account name in reverse order;
- Do not use continuous characters, such as 123, abc, etc.;
- Do not use repeating characters, such as 111, aaa, etc.

### 2. Change passwords periodically

It is recommended to periodically change the device password to reduce the risk of being guessed or cracked.

#### 3. Allocate accounts and permissions appropriately

Appropriately add users based on service and management requirements and assign minimum permission sets to users.

#### 4. Enable account lockout function

The account lockout function is enabled by default. You are advised to keep it enabled to protect account security. After multiple failed password attempts, the corresponding account and source IP address will be locked.

### 5. Set and update password reset information in a timely manner

The device supports password reset function. To reduce the risk of this function being used by threat actors, if there is any change in the information, please modify it in time. When setting security questions, it is recommended not to use easily guessed answers.

### Service Configuration

### 1. Enable HTTPS

It is recommended that you enable HTTPS to access web services through secure channels.

### 2. Encrypted transmission of audio and video

If your audio and video data contents are very important or sensitive, it is recommended to use encrypted transmission function in order to reduce the risk of your audio and video data being eavesdropped during transmission.

#### 3. Turn off non-essential services and use safe mode

If not needed, it is recommended to turn off some services such as SSH, SNMP, SMTP, UPnP, AP hotspot etc., to reduce the attack surfaces.

If necessary, it is highly recommended to choose safe modes, including but not limited to the following services:

- SNMP: Choose SNMP v3, and set up strong encryption and authentication passwords.
- SMTP: Choose TLS to access mailbox server.
- FTP: Choose SFTP, and set up complex passwords.
- AP hotspot: Choose WPA2-PSK encryption mode, and set up complex passwords.

### 4. Change HTTP and other default service ports

It is recommended that you change the default port of HTTP and other services to any port between 1024 and 65535 to reduce the risk of being guessed by threat actors.

### **Network Configuration**

#### 1. Enable Allow list

It is recommended that you turn on the allow list function, and only allow IP in the allow list to access the device. Therefore, please be sure to add your computer IP address and supporting device IP address to the allow list.

#### 2. MAC address binding

It is recommended that you bind the IP address of the gateway to the MAC address on the device to reduce the risk of ARP spoofing.

#### 3. Build a secure network environment

In order to better ensure the security of devices and reduce potential cyber risks, the following are recommended:

- Disable the port mapping function of the router to avoid direct access to the intranet devices from external network;
- According to the actual network needs, partition the network: if there is no communication demand between the two subnets, it is recommended to use VLAN, gateway and other methods to partition the network to achieve network isolation;
- Stablish 802.1x access authentication system to reduce the risk of illegal terminal access to the private network.

### **Security Auditing**

#### 1. Check online users

It is recommended to check online users regularly to identify illegal users.

#### 2. Check device log

By viewing logs, you can learn about the IP addresses that attempt to log in to the device and key operations of the logged users.

### 3. Configure network log

Due to the limited storage capacity of devices, the stored log is limited. If you need to save the log for a long time, it is recommended to enable the network log function to ensure that the critical logs are synchronized to the network log server for tracing.

### **Software Security**

### 1. Update firmware in time

According to the industry standard operating specifications, the firmware of devices needs to be updated to the latest version in time in order to ensure that the device has the latest functions and security. If the device is connected to the public network, it is recommended to enable the online upgrade automatic detection function, so as to obtain the firmware update information released by the manufacturer in a timely manner.

#### 2. Update client software in time

It is recommended to download and use the latest client software.

### Physical Protection

It is recommended that you carry out physical protection for devices (especially storage devices), such as placing the device in a dedicated machine room and cabinet, and having access control

and key management in place to prevent unauthorized personnel from damaging hardware and other peripheral equipment (e.g. USB flash disk, serial port).
